NUCLEAR SCIENCE ABSTRACTS

CUMULATIVE INDEX

All of the indexes appearing in Volumes 11 through 15 have been cumulated into this index and corrections and minor revisions have been made. Therefore, this index supersedes the separate indexes to the five volumes.

This cumulative index consists of four parts, all available from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., for \$40.25. The four parts are also available separately as follows: Corporate Author Index (\$2.50), Personal Author Index (\$14.25), Report Number Index (\$4.50), and Subject Index (\$19.00).

Organizations currently receiving *Nuclear Science Abstracts* free of charge from the Atomic Energy Commission will also receive the cumulative indexes without charge.

The cumulative Subject Index includes a list of the Journal Abbreviations used in NSA.

Cumulative indexes for Volumes 1 through 4 (1947-1950) and Volumes 5 through 10 (1951-1956) are available as follows:

Volumes 1-4 from Johnson Reprint Corp., 111 Fifth Ave., N. Y., N. Y. (\$30.00).

Volumes 5-10 from Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. (\$5.25).

Legal Notice

The AEC reports listed in this document are accounts of Government sponsored work. Neither the United States, nor the Commission, nor any person acting on behalf of the Commission:

A. Makes any warranty or representation, expressed or implied, with respect to the accuracy, completeness, or usefulness of the information contained in these reports, or that the use of any information, apparatus, method, or process disclosed in these reports may not infringe privately owned rights; or

B. Assumes any liabilities with respect to the use of, or for damages resulting from the use of any information, apparatus, method, or process disclosed in these reports.

As used in the above, "person acting on behalf of the Commission" includes any employee or contractor of the Commission, or employee of such contractor, to the extent that such employee or contractor of the Commission, or employee of such contractor prepares, disseminates, or provides access to, any information pursuant to his employment or contract with the Commission, or his employment with such contractor.

Nuclear Science Abstracts is published twice a month by the United States Atomic Energy Commission to provide abstracts of the literature on nuclear science and engineering. It is available on subscription from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. It is also available on exchange to universities, research institutions, and publishers of scientific information from the Division of Technical Information Extension, U. S. Atomic Energy Commission, P. O. Box 62, Oak Ridge, Tennessee.

INTRODUCTION

Main entries in this index are generally specific materials, things, and processes. These are followed by modifiers that describe the properties of, and processes applied to, the main entries.

The number preceding the colon is the NSA volume number, and the number following is the abstract number in that volume. The designation (R) following the abstract number indicates that the abstract is of a progress report; (P) indicates a patent; and (T) indicates a translation. Abstracts for reports other than progress reports carry no letter designation. References to report numbers, where appropriate, are included after the abstract number of the citation. Published literature (journal article or book) is identifiable by the absence of a report number.

General Indexing Style

The user should bear in mind that the ideas presented in the original literature, rather than key words, have been indexed. The indexers have tried to select what seemed the most probable and logical place to look for typical information. Since it is not possible to anticipate where a user would look for information, numerous cross references are included to assist him in his search.

Experience in using an index of this type will be the best guide in obtaining the desired information, and a consideration of synonymous or closely related terms will prove valuable.

Information must be so indexed as to be of the greatest use to the greatest number of users. This requires that a topic be indexed to headings that most specifically describe it and not ordinarily to the headings that describe its ultimate use, nor to the general class headings that include the specific headings. For example, information on the treatment of thyroid disease with I-131 would be indexed under Thyroid Diseases and under Iodine Isotopes I-131, but not necessarily under Radiotherapy. A study of the effects of x radiation on hair would be indexed under both X Radiation and Hair. However, the information would not be indexed under the experimental animal, e.g., Rats, unless the report discusses the effects on rat hair as compared with the effect on the hair of other animals.

The broad, general class headings are used only for general information or for comprehensive reports or articles.

Subject Heading Styles

Generally, the direct form of subject entry is used rather than inverted headings or, in some cases, subheadings; e.g., Amino Acids rather than Acids, amino; Helium Isotopes He-4 rather than Helium—⁴isotopes He-4 or Helium—He-4 isotopes. Note, however, that in some cases modifying terms are used parenthetically in preference to a more direct type of entry which would result in the scattering of information; e.g., Sodium (Liquid) rather than Liquid Sodium. Organic compounds, however,

are usually entered in the index in the inverted form so that substituted compounds can be listed near the parent compound; e.g., Benzene, Bromo- rather than Bromobenzene. In general, the style of nomenclature used is that of *Chemical Abstracts*, except that some items listed in that publication as subheadings are elevated to form part of the main heading; e.g., Butyric Acid, Methyl Ester rather than Butyric Acid—methyl ester.

Alphabetization

Main headings are arranged according to the widely accepted word-by-word alphabetic system. A parenthetic qualifier following a main heading is disregarded in alphabetizing unless there are two or more headings identical except for the parenthetic qualifier, in which case the qualifier determines the order; e.g., Sodium, Sodium (Gaseous), Sodium (Liquid), Sodium Acetates. Headings involving Greek letters are arranged as if the names of the letters were spelled out, e.g., Mesons (π), Mesons (ξ).

Nomenclature of Inorganic Compounds

Inorganic compounds are indexed in the direct form, listing cations in the order of increasing valence in the case of polycationic salts of varying valence and in alphabetic order for polycationic salts in which all cations have the same valence; e.g., Sodium Aluminum Silicates and Potassium Sodium Sulfates.

Multicomponent Systems

Multicomponent systems, such as alloys, are indexed only at the heading that results when all components are arranged alphabetically. See references are entered under the headings that result from placing, in turn, each component first with all other components following in alphabetic order.

Modifying Phrases (Subheadings)

Descriptive phrases (modifiers), rather than ordinary subheadings, are used under the main headings to give a better indication of the material covered in an abstract than would be possible with only a word or two whenever it appears that such information would be useful. Such phrases are written so that the idea considered most important is presented first, should a not-too-awkward expression result. However, when using this index, the reader is advised to scan all modifiers under a main heading to determine whether any abstracts in addition to the most obvious should be consulted for the desired information. Many of the modifiers are designed to be read in inverted order or to be read with the main heading inserted at the position of the comma in order to obtain a meaningful phrase; e.g., Uranium—allotropic transformation temperatures of, effect of cooling rate on is read "effect of cooling rate on allotropic transformation temperatures of uranium." In many cases, the prepositions have been omitted from such phrases provided no ambiguity results from the omission.

PARAMAGNETIC SALTS

- deuteron spin relaxation in solutions of, 12: 12006
- hyperfine structure, measurement by the electronic and nuclear double resonance, 13: 5839
- magnetic absorption in spin system, 13: 1519
- magnetic resonance, 12: 3545(R) (ORNL-870(Del.))
- neutron inelastic scattering by paramagnetic ions, Trammell's theory, 15: 11651
- nuclear magnetic resonance, amplification, 13: 6864 (A/CONF.15/P/1139)
- nuclear magnetic resonance signal from magnetic ions in, 13: 14664
- nuclear orientation of impurities in, 15: 16514
- nuclear polarization by the Overhauser effect in solutions of, 12: 12661
- nuclear relaxation transitions of copper ions in, 13: 1743
- positronium lifetimes in, quenching effects on, 13: 3214
- proton magnetic resonance relaxation time in aqueous solutions, 11: 6040
- proton spin relaxation, 11: 6559
- proton spin relaxation in solutions of, 12: 11770(T)
- resonance absorption in ions of spin = $\frac{1}{2}$, 13: 19416 (AFOSR-TN-59-220)
- resonance measurements and theory, 15: 28306
- thermal contact below 1°K, 13: 22706
- use for cooling by demagnetization, 15: 9574
- use in magnetic device for obtaining temperatures below 1°K, 15: 19501(T) (AEC-tr-3971(p.366-72))

PARAMECIUM

- genetic effects of irradiation, modifications produced by various agents, 12: 15306
- growth and division, effects of irradiation of growth medium, 15: 10618(T) (JPRS-7666(p.177-81))
- growth, effects of highly deuterated environment, 15: 10654
- phase shifts in cellular rhythmicity induced by exposure to ultraviolet radiation, 14: 15558
- radiation effects, temperature effects on, 13: 9584
- radiation effects on, at various temperatures, 13: 9585
- radiation injuries, effects of antibiotic therapy, 12: 2698
- radiation injuries, metabolic repair of premutational, 15: 14133
- radioinduced mutations, 13: 4424
- radiosensitivity, 11: 845, 1738, 11861, 12642(R) (ANL-5732)
- radiosensitivity, 12: 9585
- radiosensitivity, effect of fluorochromes, 13: 4425(T)
- radiosensitivity, effect of number per unit volume, 13: 4426(T)
- radiosensitivity in aqueous solutions, 12: 16880
- radiosensitivity to repeated ionizing irradiation, 12: 16808
- radiosensitivity, temperature effects on, 14: 14693
- recovery in stationary phase, from radiation effects leading to mutation, 13: 15897
- sensitivity to ultraviolet and visible light, 12: 15216(R) (ANL-5841)
- toxic effects of blood plasma from irradiated monkeys, 15: 24755(T) (JPRS-9422)

PARASITES

- control in rodents, 15: 31986 (ANL-6368(p.43-4))
- control of gastrointestinal helminths in cattle by irradiation of larvae, 14: 16559
- control of hookworm, 13: 20046 (TID-7572(p.160-70))
- control of mange and pinworms in rodent colonies, 14: 13540(R) (ANL-6093)
- control of mange mite on mice and dogs, 11: 7910(R) (ANL-5696)
- control of *Trichinella*, *Ascaris*, and *Hymenolepis nana* by irradiation, 11: 830(R) (AECU-3152)
- effects of irradiation on production of *Strongyloides* larvae, 15: 2465
- elimination of insects infesting grain and other foods by irradiation, 14: 1309
- elimination of insects infesting grain and other foods by irradiation, 14: 1310
- elimination of tapeworm and roundworm, by irradiation of meat, 14: 1311
- elimination of trichinel in pork by irradiation, 14: 1308

- immune reactions in host, 15: 30520
- immunity produced by administration of irradiated larvae, 15: 3892
- infection of cattle with lungworm, 15: 30520
- life cycle of nematode genus *Strongyloides*, radiobiological studies, 15: 2465
- radiation effects on helminths, 14: 23935(R) (TID-6590)
- radiation effects on developing hookworm larvae, 14: 24533
- radiosensitivity, 11: 3274(R) (AECU-3030)
- radiosensitivity of tapeworm eggs, 15: 3894
- treatment of *Ascaris megalocephala* by electrons and x rays, 14: 25191

PARATHYROID EXTRACTS

- protective effects against x irradiation, 13: 25875

PARATHYROID GLANDS

- activity, effects on bone metabolism, 12: 14562 (A/CONF.15/P/836)
- electron spin resonance pattern of irradiated extracts, 13: 16082
- function studies in children, tracer methods, 15: 14069
- treatment of tumors, 14: 23882

PARATHYROID HORMONES

- area of action, unifying concepts, 14: 23850 (UR-577)
- effects of levels, on reproduction in rats, 15: 5886
- effects on bone deposition of calcium, tracer study in rats, 12: 10348, 10349
- effects on bone physiology, tracer study, 13: 5489(R) (ANL-5919)
- effects on metabolism of calcium and strontium, tracer studies, 15: 7170(R) (TID-11320)
- effects on metabolism of carbohydrates, tracer techniques for studying, 15: 28908 (TID-13421)
- effects on phosphate transport, tracer studies, 15: 16791 (UR-589)
- physiological effects on metabolism of citrates, pyruvates, and lactates, 13: 4416
- preventive and therapeutic effects of, in radiation sickness, 15: 12782
- radiosensitivity effects, 13: 1073
- therapeutic uses for strontium-90 elimination in combination with EDTA, 15: 17208

PARIA PLATEAU QUADRANGLE (ARIZ.)

- geologic map, 14: 1708
- geologic map, 15: 27885
- photogeologic map, 11: 1099, 1108, 1116

PARIA QUADRANGLE (ARIZ.-UTAH)
